

Key information: Critical links between downregulated glycopeptides functional enrichment and substructure features.

- a: Key information on GOBP enrichment of the core structures substructure in downregulated IGPs.
b: Key information on GOCC enrichment of the core structures substructure in downregulated IGPs.
c: Key information on GOBP enrichment of the glycan types substructure in downregulated IGPs.
d: Key information on GOMF enrichment of the glycan types substructure in downregulated IGPs.
e: Key information on GOCC enrichment of the branch structures substructure in downregulated IGPs.
f: Key information on GOBP enrichment of the branch counts substructure in downregulated IGPs.
g: Key information on GOMF enrichment of the branch counts substructure in downregulated IGPs.
h: Key information on GOCC enrichment of the branch counts substructure in downregulated IGPs.
i: Key information on GOMF enrichment of the sialic acid counts substructure in downregulated IGPs.
j: Key information on GOCC enrichment of the sialic acid counts substructure in downregulated IGPs.
k: Key information on GOBP enrichment of the fucose counts substructure in downregulated IGPs.
l: Key information on GOMF enrichment of the fucose counts substructure in downregulated IGPs.
