

Key information: Critical links between upregulated glycopeptides functional enrichment and substructure features.

- a: Key information on GOBP enrichment of the core structures substructure in upregulated IGPs.
- b: Key information on GOMF enrichment of the core structures substructure in upregulated IGPs.
- c: Key information on GOCC enrichment of the core structures substructure in upregulated IGPs.
- d: Key information on GOBP enrichment of the glycan types substructure in upregulated IGPs.
- e: Key information on GOBP enrichment of the branch structures substructure in upregulated IGPs.
- f: Key information on GOMF enrichment of the branch structures substructure in upregulated IGPs.
- g: Key information on GOCC enrichment of the branch structures substructure in upregulated IGPs.
- h: Key information on GOBP enrichment of the branch counts substructure in upregulated IGPs.
- i: Key information on GOMF enrichment of the branch counts substructure in upregulated IGPs.
- j: Key information on GOCC enrichment of the branch counts substructure in upregulated IGPs.
- k: Key information on GOMF enrichment of the sialic acid counts substructure in upregulated IGPs.
- l: Key information on GOCC enrichment of the sialic acid counts substructure in upregulated IGPs.
