

a: Co-occurrence analysis revealing preferential pairing between glycan types and fucosylated types.
b: Co-occurrence analysis revealing preferential pairing between glycan types and sialylated types.
c: Co-occurrence analysis revealing preferential pairing between branch structures and glycan types.
d: Co-occurrence analysis revealing preferential pairing between branch structures and fucosylated types.
e: Co-occurrence analysis revealing preferential pairing between branch structures and sialylated types.
f: Co-occurrence analysis revealing preferential pairing between branch structures and sialic acid counts.
g: Co-occurrence analysis revealing preferential pairing between branch structures and fucose counts.
h: Co-occurrence analysis revealing preferential pairing between branch counts and sialic acid counts.
i: Co-occurrence analysis revealing preferential pairing between branch counts and fucose counts.
j: Co-occurrence analysis revealing preferential pairing between fucosylated types and core structures.
k: Co-occurrence analysis revealing preferential pairing between fucosylated types and glycan types.
l: Co-occurrence analysis revealing preferential pairing between fucosylated types and branch structures.
