

a: Volcano plot of differentially expressed glycopeptides in the dataset, showing significant up- and downregulated IGPs (FC > 1.5 or < 0.67, P value < 0.05).
b: PCA plot based on up and downregulated glycopeptides expression profiles.
c: Heatmap of differentially expressed glycopeptides, revealing global expression trends and group-wise clustering.
d: Top 10 most frequently observed upregulated and downregulated glycan structures, excluding oligo-mannose types, highlighting distinct compositional shifts.
e: Top 10 differential IGPs based on auc.
f: Top 10 differential IGPs based on random forest-based features importance score.
g: Top 10 differential IGPs based on XGBClassifier-based features importance score.
h: Top 10 differential IGPs based on PCA-based features importance score.
i: Top 10 differential IGPs based on anova-based f score.
j: Top 10 differential IGPs based on chi2-based chi2 score.
k: Overview of identified features from differential analysis.
